

## **GEATOR 2400**

<b>Chemical Nature:</b>	mixture of surfactants in aqueous base.
<b>Active Substance:</b>	approx. 18%
<b>pH:</b>	approx. 7,5
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	colorless liquid
<b>Utilization:</b>	penetrator for impregnation and finishing

### **PROPERTIES**

---

GEATOR 2400 is a penetration agent. Due to its chemical nature, GEATOR 2400 enables a good penetration of the resins used in impregnation for both full grain and corrected grain leathers. Since there are no ammoniac components, GEATOR 2400 does not present risk of staining the leathers when they are piled or hanged to dry. It is recommended a usage from 60 to 80 g/L of GEATOR 2400 in impregnation solutions for buffed leathers, and from 80 to 100 g/L in solutions for full grain leathers. GEATOR 2400 can also be used as penetration auxiliary for finishing in general.
