

GEALUX FINISH PW 200

Chemical Nature:	combination of waxes and oils with low hydrophilicity for hot application
Active Substance:	approx. 99%
Melting Point:	approx. 60°C
Ionic Charge:	non ionic
Aspect:	yellow solid
Utilization:	leathers with pull-up effect, “crazy horse” type

PROPERTIES

GEALUX FINISH PW 200 is a wax developed to provide aged type paraffin effect and pull-up on leather. Due to its chemical nature, it has little affinity with water and polar solvents. Therefore, it is recommended for “crazy horse” type leathers. Besides not harming the leathers' water repellency, it also enables an increase in values, in MAESER as well as BALLY tests. It is recommended to be applied at 75°C, in thermodot type machine, with loads between 100 and 120 g/m², according to the desired final effect. It can be used pure or combined with the oil GEOFAT FINISH HF, depending of the intensity and hardness of the pull-up effect. It can be applied in two parts, and behaves very well to felt polishing.
