

GEATAN GR LÍQ

Chemical Nature:	diyidroxi diphenil sulphonic based synthetic tanning
Active Substance:	approx. 40%
pH (10%):	approx. 4,0
Ionic Charge:	anionic
Aspect:	chestnut reddish liquid
Light Fastness:	excellent
Utilization:	all types of retanning

PROPERTIES

GEATAN GR LÍQ. Is a synthetic tannin of dihydroxi diphenil sulfonic condensation. Produces round touch, soft, fine and silky grain full leathers. It is recommended as retanning agent or as whitening agent for all types of chrome or vegetable tanned leathers. Combined with vegetable tannins, particularly with GEATAN TR, produces full, compact leathers of small porosity and good grain firmness. Used in colored leathers, produces clean and well equalized dyeings. Thanks to its composition, it has optimal resistances to ageing and U.V. rays. Therefore, it is especially recommended for white and light tint leathers. GEATAN GR LÍQ. is compatible with all types of synthetic and vegetable tannins. It provides leathers with good capacity to sandpapering and presents a good behavior to drumming, resulting a well leveled and designed break. Due to its tanning characteristics, it can be used in pretanning and tanning of chrome free leathers, whether in simply vegetable leathers as well as in Bio-leather. The use of GEATAN GR LÍQ. is recommended in various articles, in special for furniture upholstering, automotive leathers, as well as in nappas in general.
