

## **GEAGROUND WD-1**

<b>Chemical Nature:</b>	combination of natural and synthetic waxes and binders
<b>Solids Content:</b>	approx. 15%
<b>pH:</b>	approx. 9,0
<b>Ionic Charge:</b>	anionic
<b>Aspect:</b>	yellowish liquid
<b>Utilization:</b>	natural, reactive finishings

### **PROPERTIES**

---

GEAGROUND WD-1 is a pre-base recommended for all finishing types that require natural appearance, transparency and, mainly, an improvement in the grading of the leather. GEAGROUND WD-1 gives pelts a fine "tightness" feel resulting from the excellent masking of existing defects without losing the natural leather aspect. In order to achieve such a result, it is recommended to use 350/400 parts of GEAGROUND WD-1, 30/50 parts of pigment and enough water for application with spray gun. GEAGROUND WD-1 may be combined with other products such as waxes, casein and binders. For application on roller coating machines, it is advisable to use GEAGROUND WD-1 in higher concentrations.
