

GEALUX FINISH 350 SS

Chemical Nature:	combination of special waxes for hot application
Active Substance:	approx. 98%
Melting Point:	approx. 52°C
Ionic Charge:	no ionic
Aspect:	white to Yellowish solid
Utilization:	pre-base for natural, waxy finishings

PROPERTIES

GEALUX FINISH 350 SS is a wax with covering and darkening properties. Applied before the finishing, it seeks to level up the penetration of the finishing, always keeping the natural aspect of the leather. Its properties become more obvious when used on corrected grain leather as it is then possible to apply a larger quantity of the product into the leather. GEALUX FINISH 350 SS is applied using a roller coating machine with the roller at 60° C. It is recommended to apply the product at a rate of 100 g/m². Once the product has been applied, leave the leather to rest for 6 hours. Then, apply either the roller or a smooth plate at 110° C. Subsequently, apply the desired finishing. GEALUX FINISH 350 SS imparts hard break to the leather, a characteristic of finishings containing natural waxes such as carnauba wax. It also provides softness.
