

GEGROUND NF

Chemical Nature:	water-borne resins based on polyacrylates, polyurethanes, and auxiliaries.
Solids Content:	approx. 23%
pH:	approx. 8,0
Ionic Charge:	anionic
Aspect:	viscous white liquid
Utilization:	pre-bottom and bottom for scoured and full finishes to reconstitute the grain and mask defects.

PROPERTIES

GEGROUND NF is a pre-bottom used to obtain a reconstruction of the grain, mask or “hide” the defect, and fill-out small defects of the leathers' surface, besides reducing the pores size and improving the leveling of the subsequent finish layers' absorption. On leathers with “burned grain” problems, it acts as “sealing” of the grain, enabling to obtain smooth, transparent, and equalized finishes.

GEGROUND NF can be used in full grain or scoured leathers. Its application has better closing effect when applied in multi-dot machines, not being necessary a high load to obtain good results. It is recommended to apply the product pure for the application on multi-dot machines, or diluted half and half in water when applied with spray gun. If necessary, pigments are compatible to improve the covering power.

GEGROUND NF can be used for natural finishes. It presents good adhesion with the different types of finishes, and can also be directly embossed and/or milled. It also presents good softness, which makes the obtainment of natural leathers easy.

GEGROUND NF cannot be scoured or polished. Its balanced composition grants a very silky touch to the leather, maintains the finishes natural look, without harming the adhesion of finishes.
