

## **GEORESIN IFL**

<b>Chemical Nature:</b>	acrylic polymer emulsion
<b>Active Substance:</b>	approx. 35%
<b>pH:</b>	approx. 5,0
<b>Ionic Charge:</b>	anionic
<b>Film Hardness:</b>	medium
<b>Film Transparency:</b>	translucent
<b>Aspect:</b>	white opalescent liquid
<b>Utilization:</b>	impregnation for corrected grain leathers

### **PROPERTIES**

---

GEORESIN IFL is an acrylic resin of small particles and excellent penetration and softness, specially indicated for corrected grain leathers impregnation as well as for soft finishes. Due to its kind of link with the leather fibers, GEORESIN IFL achieves excellent results of grain tightness when used as impregnation resin, without changing the leather softness. GEORESIN IFL have its results enhanced when used in combination with penetrators of GEATOR range.

Because of the film characteristics, GEORESIN IFL is also indicated for covering coats on articles like napa, furniture upholstery and tumbled leathers in general.
