

## **GEOTAN WB**

<b>Chemical Nature:</b>	masking agent
<b>pH:</b>	approx. 3,5
<b>Aspect:</b>	clear liquid
<b>Utilization:</b>	chrome and metal-free tanning

### **PROPERTIES**

---

GEOTAN WB is a masking agent based on a new concept that is suitable for chrome tanning or any other kind of tanning. When used in chrome tanning, GEOTAN WB promotes the penetration and distribution of chromium in the leather even when pickling has not fully spread to all areas of the hides. In wet-white tanning and when phosphonium salts (such as GEOTAN AD/75) are employed, GEOTAN WB reduces the huge tanning power of phosphonium salts thus preventing their fixation on the grain thus promoting their distribution into all areas of the leather.
