

## **GEALUX FINISH DS**

<b>Chemical Nature:</b>	combination of waxes with strong darkening effect, to be applied hot
<b>Active Substance:</b>	approx. 98%
<b>Melting Point:</b>	approx. 46°C
<b>Ionic Charge:</b>	non ionic
<b>Aspect:</b>	white yellowish solid
<b>Utilization:</b>	leathers with pronounced pull-up effect and high darkening.

### **PROPERTIES**

---

GEALUX FINISH DS is a wax specially developed to provide strong effect of darkening with pronounced pull-up effect. GEALUX FINISH DS is a wax of soft hardness that provides optimal leveling of the black effect on the hide. At the same time sealing the hide it provides optimal reactivity of the leather. Another very important characteristic is that GEALUX FINISH DS does not evidence in a significant way natural marks and defects of the hide. It has an agreeable and soft surface touch. It is recommended to apply GEALUX FINISH DS at a temperature close to 60C in order to obtain the complete melting of the wax. To achieve a better result it is convenient to apply the wax on thermodot type machines with an average load of 80-160 g/m<sup>2</sup>, depending of the desired effect. After applying the wax the leathers can be polished. In this case the darkening and sealing effect is highly evidenced. GEALUX FINISH DS can also be combined with the oils line GEOFAT FINISH in order to obtain differentiated results of softness, pull-up effect, and surface touch. As previously mentioned, this wax differentiates from the majority of finish paraffins for being soft and, therefore, not "hardening" very much the finished leathers.
