

GEATAN MGS

Chemical Nature:	mirabolano-based tannin modified with synthetic tannin
Active Substance:	approx. 90%
pH (1:10):	approx. 3,5
Ionic Charge:	anionic
Aspect:	brown powder
Utilization:	all sorts of vegetable tanning and retanning

PROPERTIES

GEATAN MGS is a mirabolano tannin modified with synthetic components in order to reduce astringency and provide lighter shades. It may be used both in tanning and retanning and applied on both full vegetable-tanned and chrome leather. In full vegetable tanning, GEATAN MGS imparts compaction, softness, firmness of the grain and light shades. In this case, it is recommended to combine GEATAN MGS with mimosa and quebracho tannins so as to increase its tanning power. When used as a retanning agent for chrome leathers, GEATAN MGS produces compact, non-elastic leathers with firm grain, that is, the typical characteristics of vegetable-tanned leather. It is compatible with all other vegetable tannins as well as synthetic and resinous tannins. It may be used on all sorts of articles such as leather for footwear, leathersgoods and upholstery. It is recommended to use between 6 and 10% calculated on the weight of the shaved pelts together with the other retanning agents. GEATAN MGS differs from GEATAN MGT because it imparts a higher degree of softness and lighter shades.
