

GEATAN GN

| | |
|-------------------------|---|
| Chemical Nature: | neutralizer based on synthetic tannins and organic salts. |
| Active Matter: | approx. 32% |
| pH (10%): | approx. 7,0 |
| Ionic Charge: | anionic |
| Aspect: | dark chestnut liquid |
| Utilization: | neutralizing agent of buffing effect |

PROPERTIES

GEATAN GN is a neutralizing tannin with excellent disacidifying power of leathers. Due to its balanced composition, it presents soft and deep action. Produces neutralization of the leather acidity through reaction of its components with free acids, besides producing a light retanning effect. For not causing alkaline pH peaks, it does not affect the grain firmness and provides leathers with smooth grain and fine pores. GEATAN GN presents as well dispersing effect on retanning agents, providing a better distribution of the different tannins in the leather. It presents good stability to electrolytes and leveling effect.
