

GEALUX K 320

Chemical Nature:	soft waxes in emulsion
Active Substance:	approx. 12%
pH (10%):	approx. 7,0
Ionic Charge:	cationic
Aspect:	viscous opalescent liquid
Utilization:	combination of pre-bottoms, and as final touch

PROPERTIES

GEALUX K 320 is a synthetic cationic wax emulsion used in combinations of pre-bottoms for the correction of “burned grain”, and for regularizing the finish absorption. GEALUX K 320 is perfectly miscible with any product of our cationic line. It gives the finishes a natural, silky and “full” touch, therefore, being recommended for apparel nappa finishes. GEALUX K 320 is also used as final touch agent after the fixation, providing a fatty and “locked” touch, including on leathers fixed with nitrocellulose-based lacquers.
